Sec No- 9	Team No- 13	Project Title- Online Food Delivery Platform
------------------	--------------------	---

1. Abstract

The **Online Food Delivery Platform** is a web-based system designed to replicate a food delivery ecosystem by connecting customers, restaurants, and delivery partners through a centralized platform. The system addresses the need for a convenient and efficient method of restaurant management, food ordering, payment processing, delivery assignment, and order tracking. Customers can browse restaurants, view available menus, place orders, make online payments, and track their orders. Restaurants can manage their menus, receive and process customer orders, and update order statuses. Delivery partners can receive assigned orders and manage deliveries using location-based services and live tracking. The platform incorporates **Socket.io** to support real-time communication and live order tracking between customers, restaurants, and delivery partners. **Google Maps API** is used for location and delivery tracking, while **Razorpay** facilitates online payment processing. An **Admin Commission Panel** enables administrators to monitor platform activities, manage commissions, and oversee the overall system. The backend is developed using **Node.js** and **Express.js**, while **React.js** is used to build the user interface. **MySQL** is used for structured storage and management of users, restaurants, menus, orders, payments, deliveries, and reviews. The proposed platform integrates ordering, payment, delivery assignment, tracking, ratings, and offers into a unified system, providing an organized and efficient food delivery experience for all stakeholders.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030509	M.V.L.SAMHITA	SAMHITA
2520030108	SAHASRA GANDLA	SAHASRA
2520030510	TADUKULA TEJASWINI	TEJASWINI

3. Frameworks / Platforms / Software Used

- **React.js** – Frontend development
- **Node.js** – Backend runtime
- **Express.js** – Server-side API development
- **MySQL** – Database management
- **Socket.io** – Real-time communication and live order tracking
- **Google Maps API** – Location and delivery tracking
- **Razorpay** – Online payment processing
